All our vehicular access equipment has a double face version, in which you can blend two machines into one. The faces can be different or the same, choosing between dispenser, reader and payment devices.

Our double face columns allow you to control two independent lanes into a two-way street. Placing this type of equipment in the center of the lane brings an economic saving and makes installation, wiring, use and maintenance easier.

You can make different combinations of barcodes and RFID, making a mix of both. These columns can accept and dispense all kinds of credentials and make payments.

√ IP intercom

√ For exterior use

√ Barcode/ RFID

√ Access by smartphone

√ Dispense, Read and/or Pay

√ Customized tickets

√ Double face

Customization
Our clients can choose both colors and design of the frontal casing, including advertisements. You can also choose the building material and any color for their exterior finish.

Touch screen
Our columns have two color screens that can be touch screens. This allows you multiple options like selecting different destinations or accessing by a numeric code.

Multiple technologies
Our columns have a wide range of readers, 1D or 2D(QR) barcode, Mifare RFID cards, UHF long range devices, Bluetooth...
